Subject: Progress at Bremerton Gas Works EPA Site

I am not sure if consultants have contacted you directly but wanted to share that further investigatory sampling on beach adjacent to Sesko Property will be conducted July 8th (see Figure 2 Attachment above for sampling locations). The data from this review along with data from previous sampling efforts will be used to determine if an interim action on beach is needed to protect human health and the environment.

This assessment work is part of the Emergency Action that began with the leaking pipe in 2010 managed by USCG. Further assessment work will be conducted during RI/FS process and further removal may be warranted.

I am leading correspondence with EPA and working with Erika to review data as it arrives. Erika will be the SQU Site Manager once site transitions from emergency review status to more long-term RI/FS process.

Let me know if any questions.
